

# GIROO Token – Lite Whitepaper

1. Overview GIROO is a simple, transparent meme token deployed on the Base Network (Ethereum L2, Chain ID 8453). The project is centered around a friendly baby giraffe mascot and a growing community. There are no complex mechanics: no reflections, no rewards tokens, no hidden taxes. The focus is memes, community building and clear, verifiable on-chain data.

2. Core Details • Token Name: GIROO • Symbol: GIROO • Network: Base (Chain ID 8453) • Contract Address: 0xe6a6B2007835CEBBd341f58f2973097a1B6De68C • Decimals: 18 • Total Supply: 100,000,000,000 GIROO (100B) • Buy/Sell Tax: 0% (no transfer tax) • Mint Function: Disabled after deployment (no additional supply) • Ownership: Deployer is the founder, Robbe Steen.

3. Token Allocation (Initial Concept) The entire 100B GIROO supply is initially held by the deployer wallet. From there, tokens will be distributed transparently according to the following high-level plan: • Liquidity Pool: A portion of the total supply will be added to a GIROO–ETH liquidity pool on a DEX on Base. • Community & Growth: A portion of supply may be used in the future for community incentives, partnerships and marketing. • Team / Founder: A portion of tokens will remain with the founder wallet and will be handled responsibly and transparently. Exact percentages and amounts will be decided and communicated publicly before or at the time of launch. All movements will be visible on-chain.

4. Liquidity & Trading At launch, an initial GIROO–ETH liquidity pool will be created on a decentralized exchange (DEX) on the Base Network. Key principles: • No hidden taxes or transfer fees – swaps are simple ERC-20 transfers. • Liquidity pool details (pair address, initial liquidity and any locks) will be announced on the official channels. • The goal is to provide enough initial liquidity so that normal buys and sells are possible without instantly draining the pool.

5. Security & Contract Design GIROO is a straightforward ERC-20 token without advanced or confusing features. Design choices to reduce risk: • No reflections, rebasing, or custom transfer logic that could surprise users. • No automatic blacklist/whitelist logic inside the contract. • No built-in trading limits such as max buy or max wallet for normal users. • No functions to mint additional tokens after deployment. Users should always verify the contract address directly on BaseScan: 0xe6a6B2007835CEBBd341f58f2973097a1B6De68C

6. Roadmap (High Level) Phase 1 – Foundation • Deploy GIROO contract on Base • Verify contract on BaseScan • Launch official website page: [tilsvar.nl/giroo](https://tilsvar.nl/giroo) • Open official social channels (X/Twitter, Telegram)

Phase 2 – Launch • Create and announce the initial DEX liquidity pair • Publish liquidity information (pair link, LP lock if used) • Begin community-building and meme content around GIROO

Phase 3 – Growth • Collaborations with other Base communities and creators • Community events, giveaways and meme contests where possible • Continuous improvement of website and branding

Phase 4 – Long Term • Explore potential utility or integrations if the community desires it • Maintain transparent communication about any future plans • Keep GIROO meme-first, transparent and community-focused

7. Official Links • Website (GIROO page): <https://tilsvar.nl/giroo> • X (Twitter): <https://x.com/GIROOcoin> • Telegram: <https://t.me/GIROOcoin> • Founder LinkedIn: <https://www.linkedin.com/in/robbe-steen-84a691392>

8. Risks & Disclaimer GIROO is a meme token and should be treated as a highly speculative digital asset. Key risks include but are not limited to: • Volatility: The price of GIROO can move up or down rapidly. • Liquidity Risk: Liquidity in the trading pool may be low at times. • Smart Contract & Ecosystem Risk: While the contract is simple, all blockchain systems carry technical and economic risks. • No Guarantees: There are no promises of profit, returns, or future utility.
